 **Airflow Summit**
Let's flow together

September 19-21, 2023,
Toronto, Canada

About Me

I am a Software Architect working for American Express. My expertise has been on Data Engineering and Governance space

Recently I spent significant amount of my time understanding and solutioning Apache Airflow for our enterprise needs

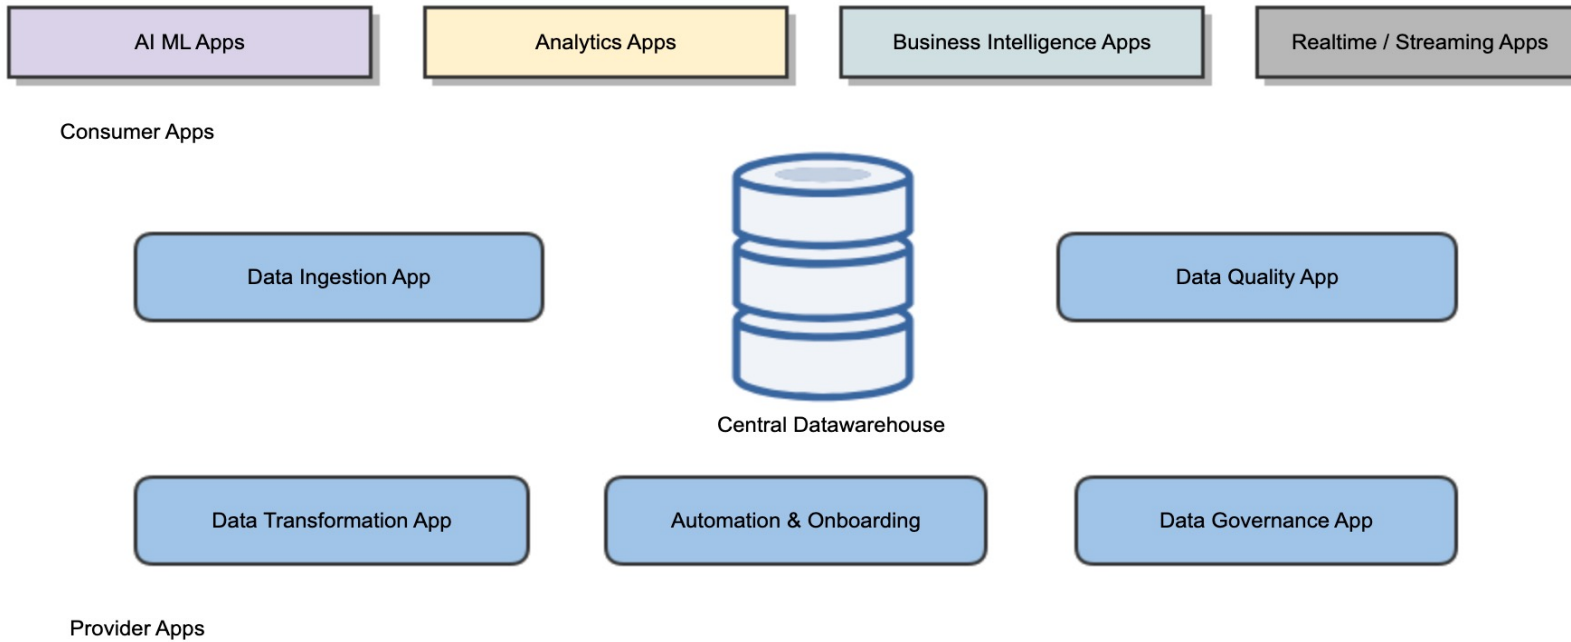

I live in Phoenix , Az with my family

I like to talk about anything data. In my free time, I love to catch up on movies, travelling to mountains, listening to music

Table of Contents

- Context
- Problem Statement
- Solution I
- Solution II
- Solution III
- Key Takeaways
- Q & A

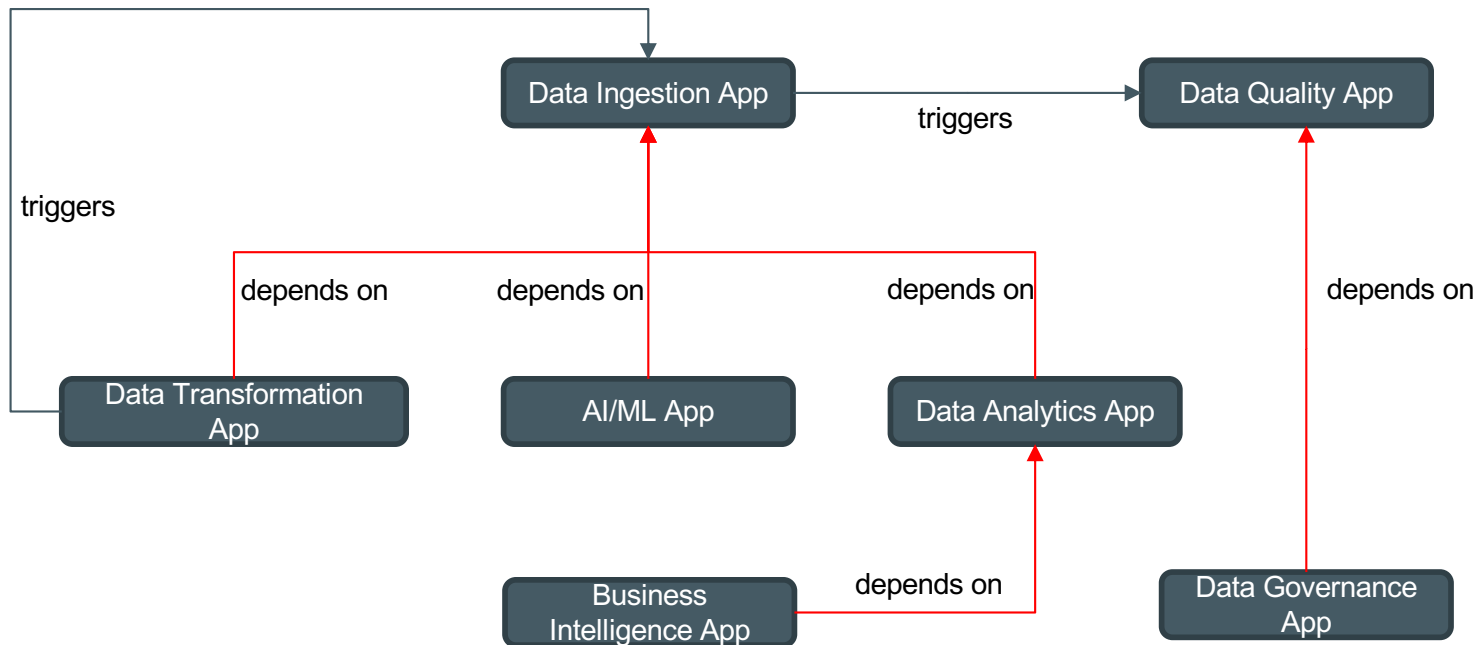

Context – Multiple Airflow Environments

Each app runs in its own project.
Projects cannot share resources

Each project has its own Apache
Airflow instance

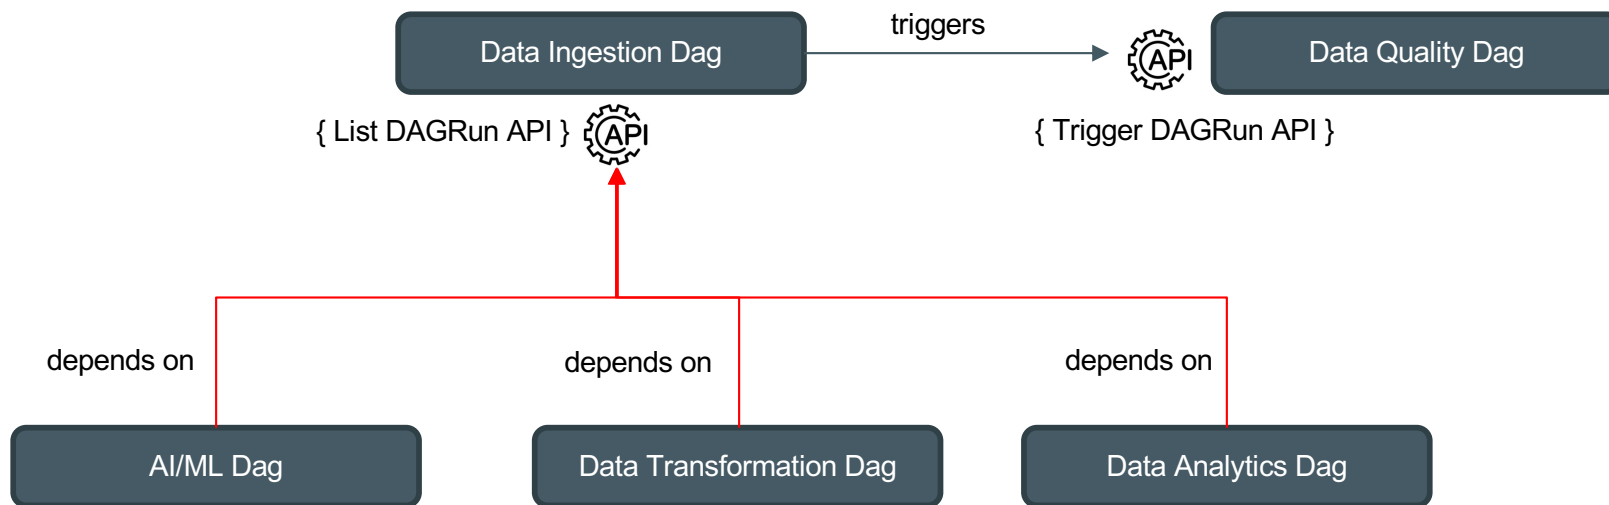

Problem – Cross Environment Triggers & Dependencies

Problem 1: A dag should be able to trigger a dag in another project

Problem 2: A dag should be able to build a dependency on the dag in another project

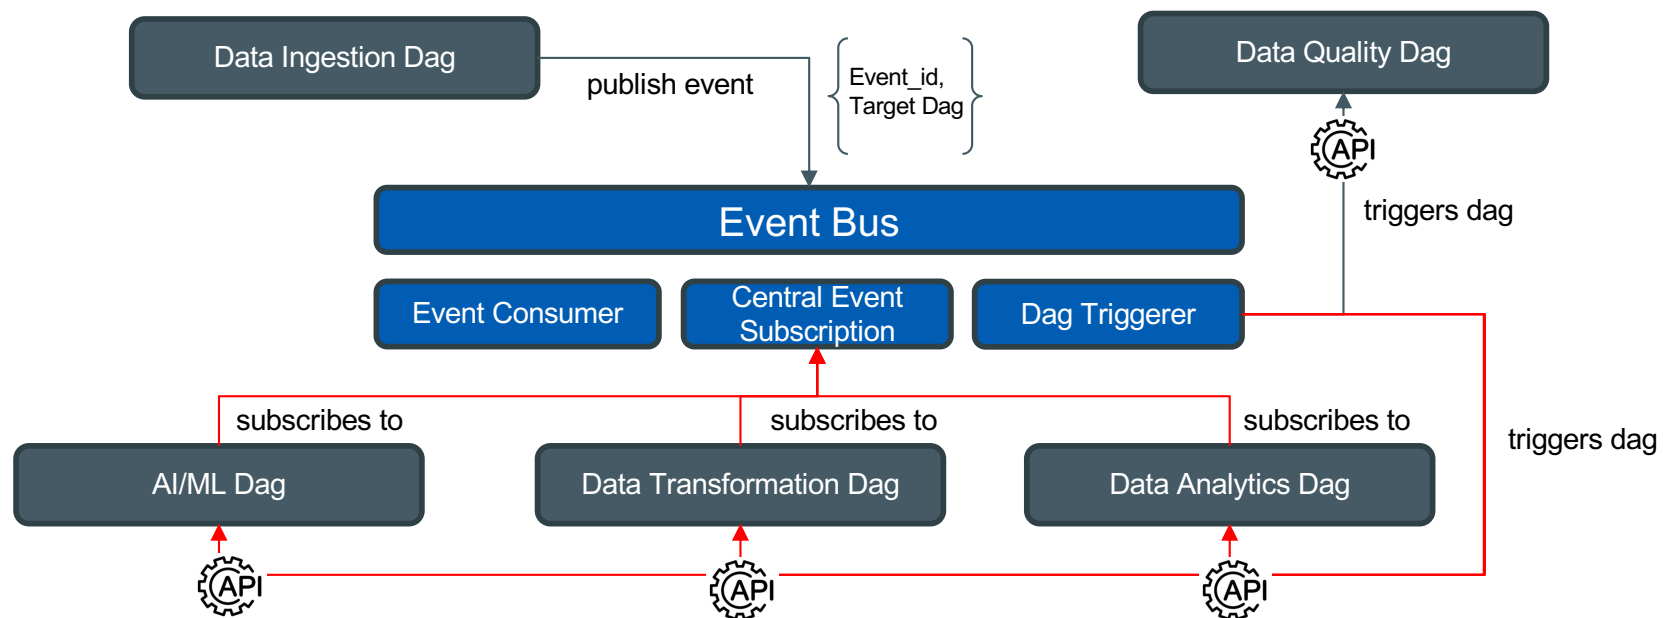

Solution I - Leverage Airflow API's

Pros
Easy to implement with minimal code
Good option for 1-2 instances

Cons
Tightly coupled approach
Thousands of sensors hitting Airflow API's

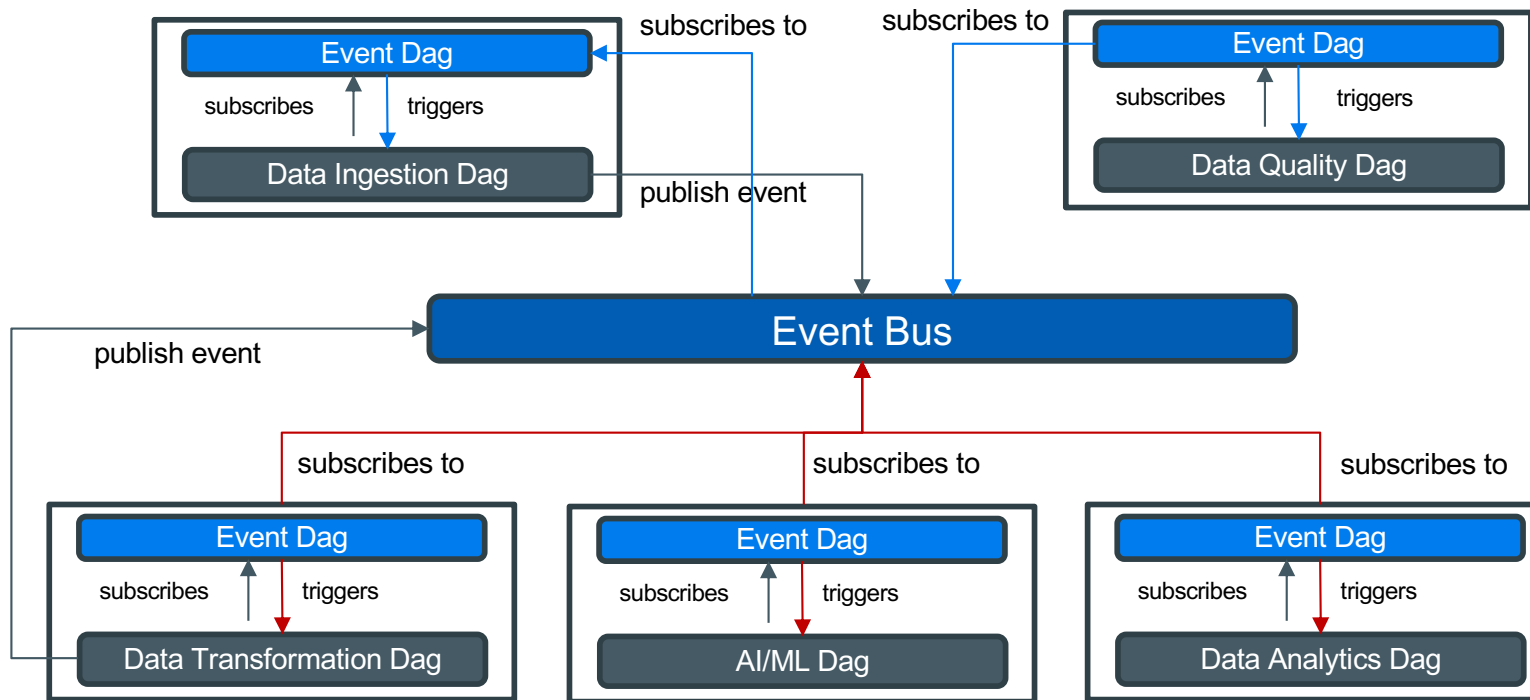

Solution II – Centralized Event based triggers

Pros
Decoupled Approach, each environment can evolve independently
Good option for more than 2-3 airflow instances

Cons
Need central application and additional team to manage the events
Higher development effort

Solution III – Decentralized Event based triggers

Pros

- Decoupled Approach and decentralized approach
- Good option for more than 2-3 airflow instances

Cons

- Need good inner-sourcing practice
- Initial development effort

Key Takeaways

Yes, we can build event-based triggers and dependencies with airflow

Features	Leverage Airflow API's	Centralized Event based Triggers	Decentralized Event based Triggers
Number of Airflow Environments	1-3	> 1	> 1
Decoupled Approach	No	Yes	Yes
Development Effort	Low	High	Medium
Ongoing Maintenance	Low	High	Low
Cost	Low	High	Medium
Scalability	No	Yes	Yes
Extendable beyond Airflow	No	Yes	Yes
Inner sourcing	Low	Low	High
