Agenda

1. Past. Event-driven scheduling was already there!
2. Present. What's new?
3. Future. What is missing?

Past.
Event-driven
scheduling was
already there!

3.0

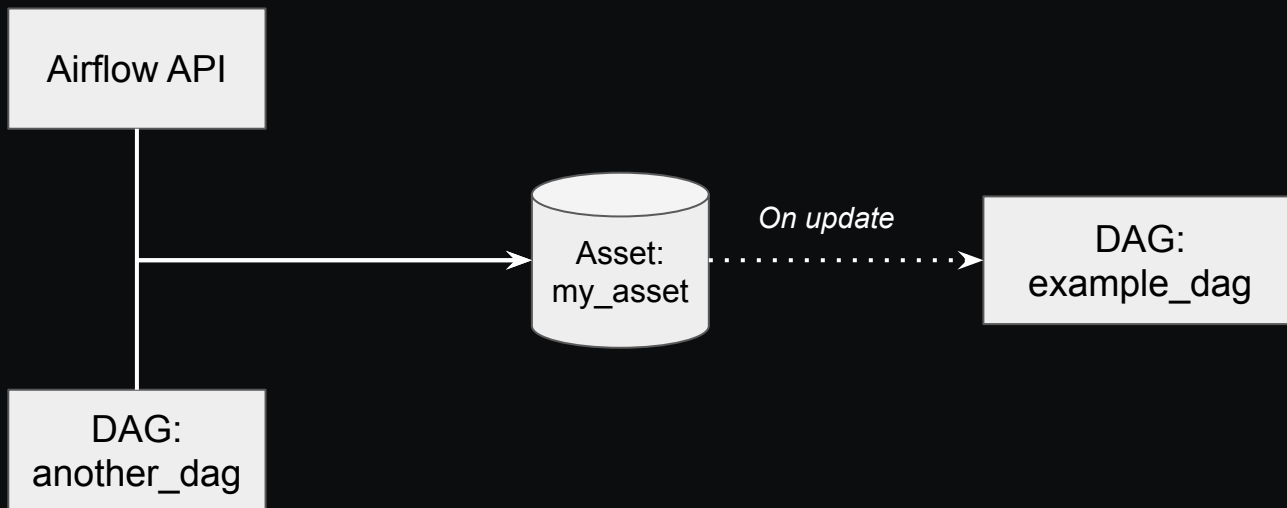

Past. Event-driven scheduling was already there!

```
asset = Asset("my_asset")

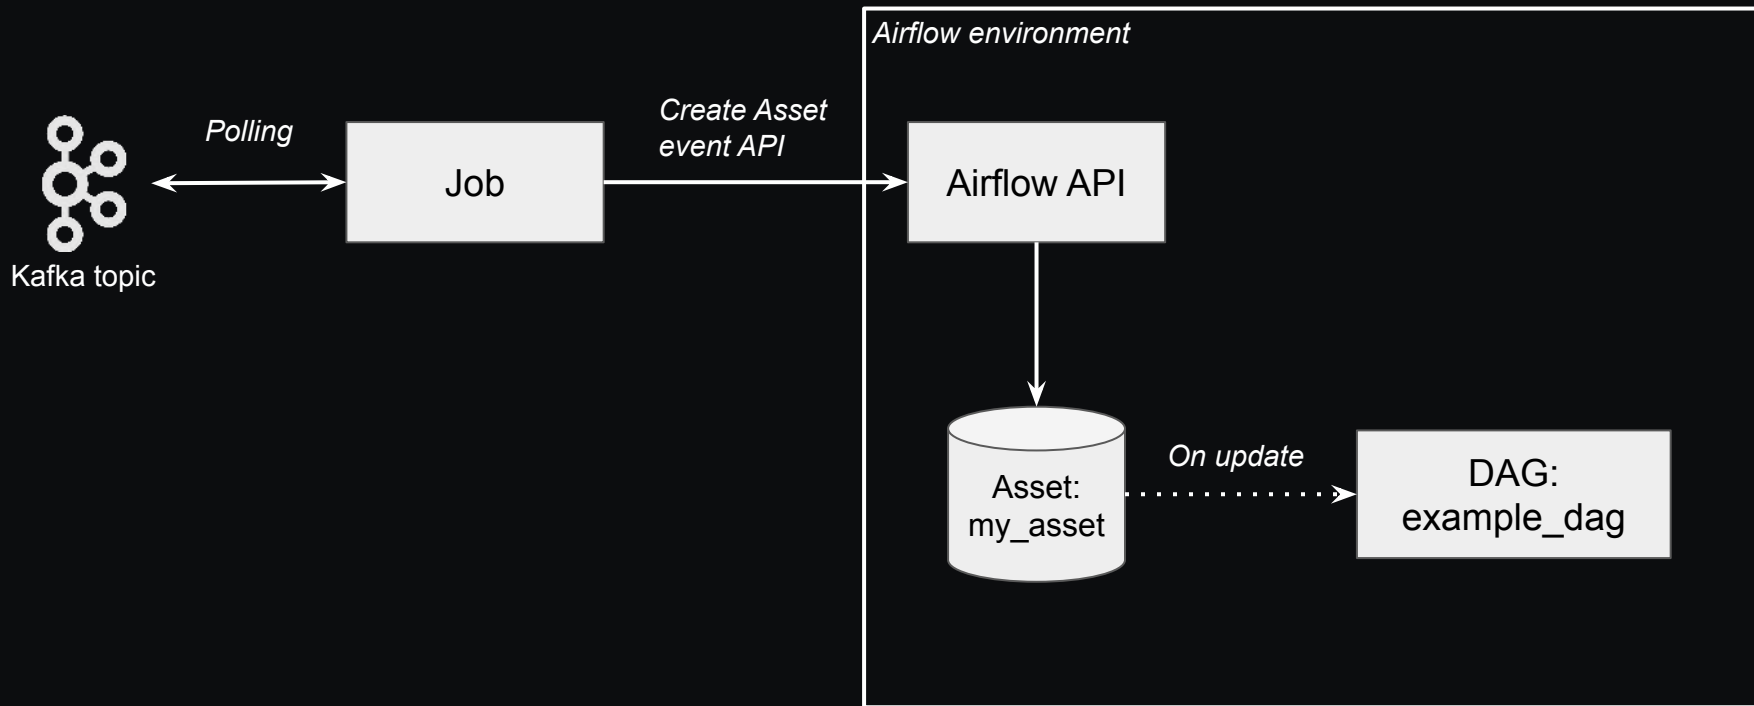

with DAG(
    dag_id="example_dag",
    schedule=[asset],
):
    @task
    def my_task():
        print("Hello world")

    ! chain(my_task())
```

Past. Event-driven scheduling was already there!

Past. Event-driven scheduling was already there!

**Present.
What's new?**

3.0

Present. What's new?

```
asset = Asset("my_asset")

)

with DAG(
    dag_id="example_dag",
    schedule=[asset],
):
    @task
    def my_task():
        print("Hello world")

    chain(my_task())
```

Present. What's new?

```
trigger = MessageQueueTrigger(  
    scheme="kafka",  
    topics=["my_kafka_topic"],  
)  
asset = Asset("my_asset")  
  
with DAG(  
    dag_id="example_dag",  
    schedule=[asset],  
):  
    @task  
    def my_task():  
        print("Hello world")  
  
    chain(my_task())
```

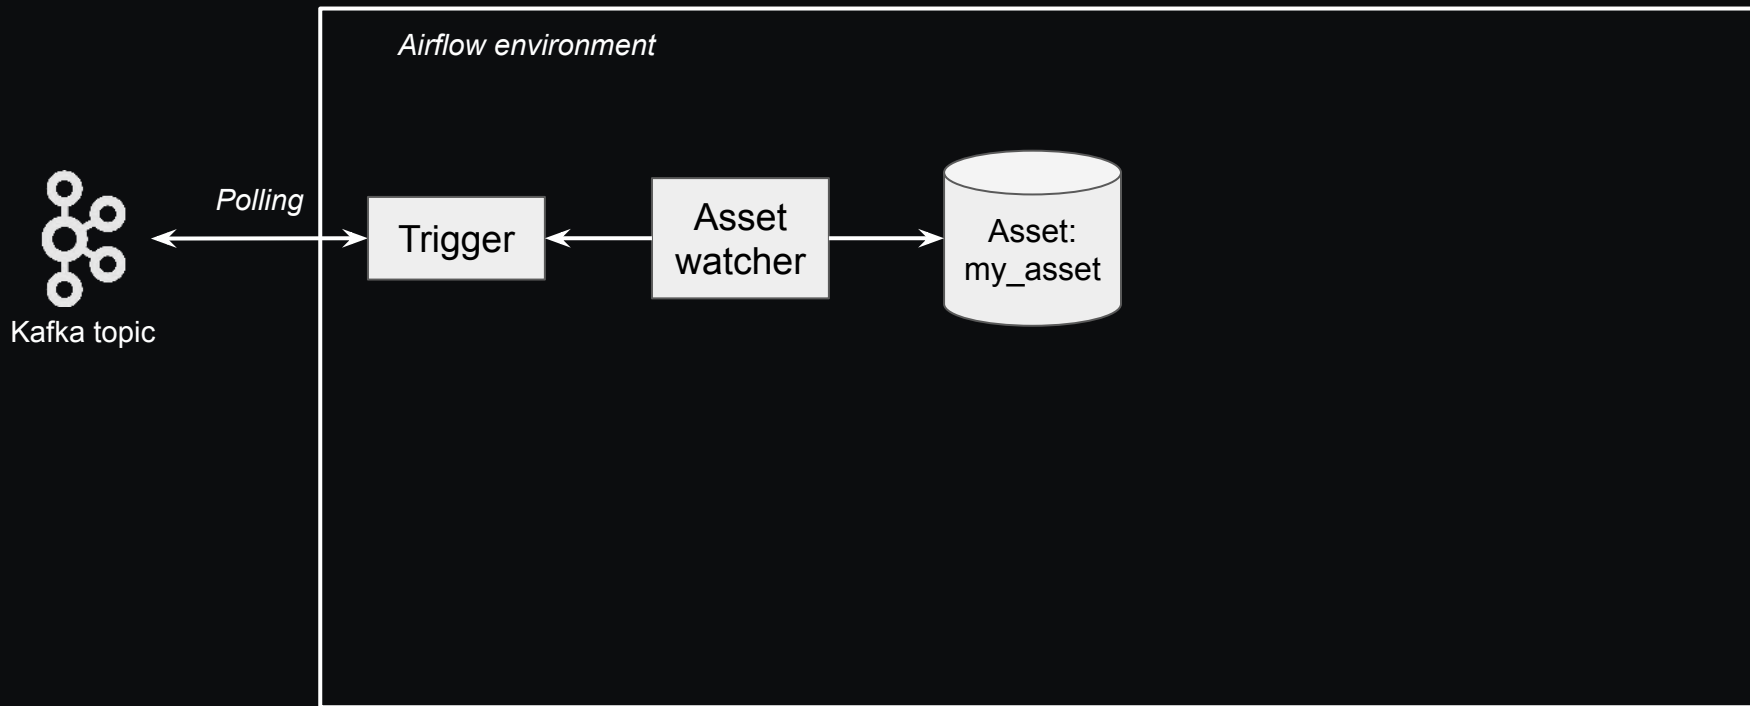

Present. What's new?

```
trigger = MessageQueueTrigger(  
    scheme="kafka",  
    topics=["my_kafka_topic"],  
)  
asset = Asset("my_asset", watchers=[  
    AssetWatcher(name="my_asset_watcher", trigger=trigger)  
)  
  
with DAG(  
    dag_id="example_dag",  
    schedule=[asset],  
)  
:  
    @task  
    def my_task():  
        print("Hello world")  
  
    = chain(my_task())
```
