Achievements

Highlights

☆ PRO

- Passionate about building data tools!
- Started Apache **Airflow** at Airbnb in 2014
- Started Apache **Superset** at Airbnb in 2015
- Founder at preset.io
- hyper fullstack -> turns out fantastic for the AI era
- Where my mind is at? **agent orchestration + AI enablement**

Agenda

- 01 What's wrong with AI!?
- 02 Agor: A shared, real-time workspace
- 04 AI teammates
- 05 A control plane for agent workflows
- 06 **Live demo**

What's broken in AI workflows?

Boxed into silos

Agents live in **personal terminals** , but real processes cut across **teams**.

Context everywhere, truth nowhere

Knowledge is **scattered** across repos, docs, and DMs — agents answer without your **actual context**.

Zero line of sight

Tokens burned isn't a KPI. Nobody can point to which AI work **impacted the business**.

Married to one model

It's a **multi-model** world. Locking to a single frontier is tomorrow's migration.

Lack of governance

Configuration sprawl. Secrets in the wrong places.

Lack of observability

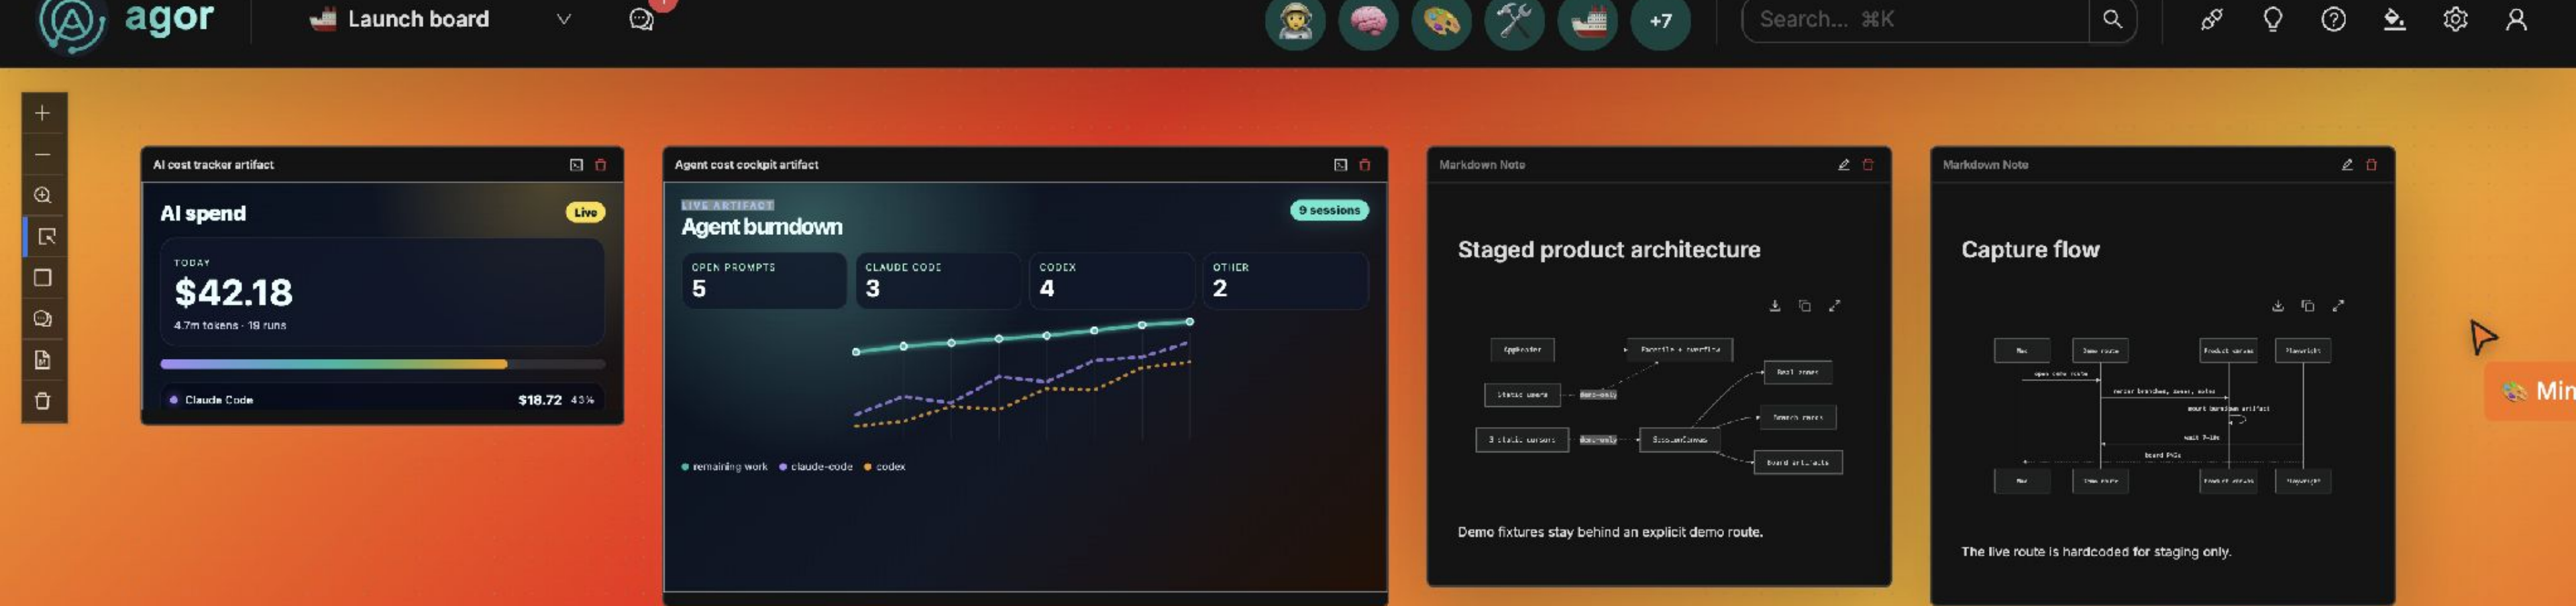

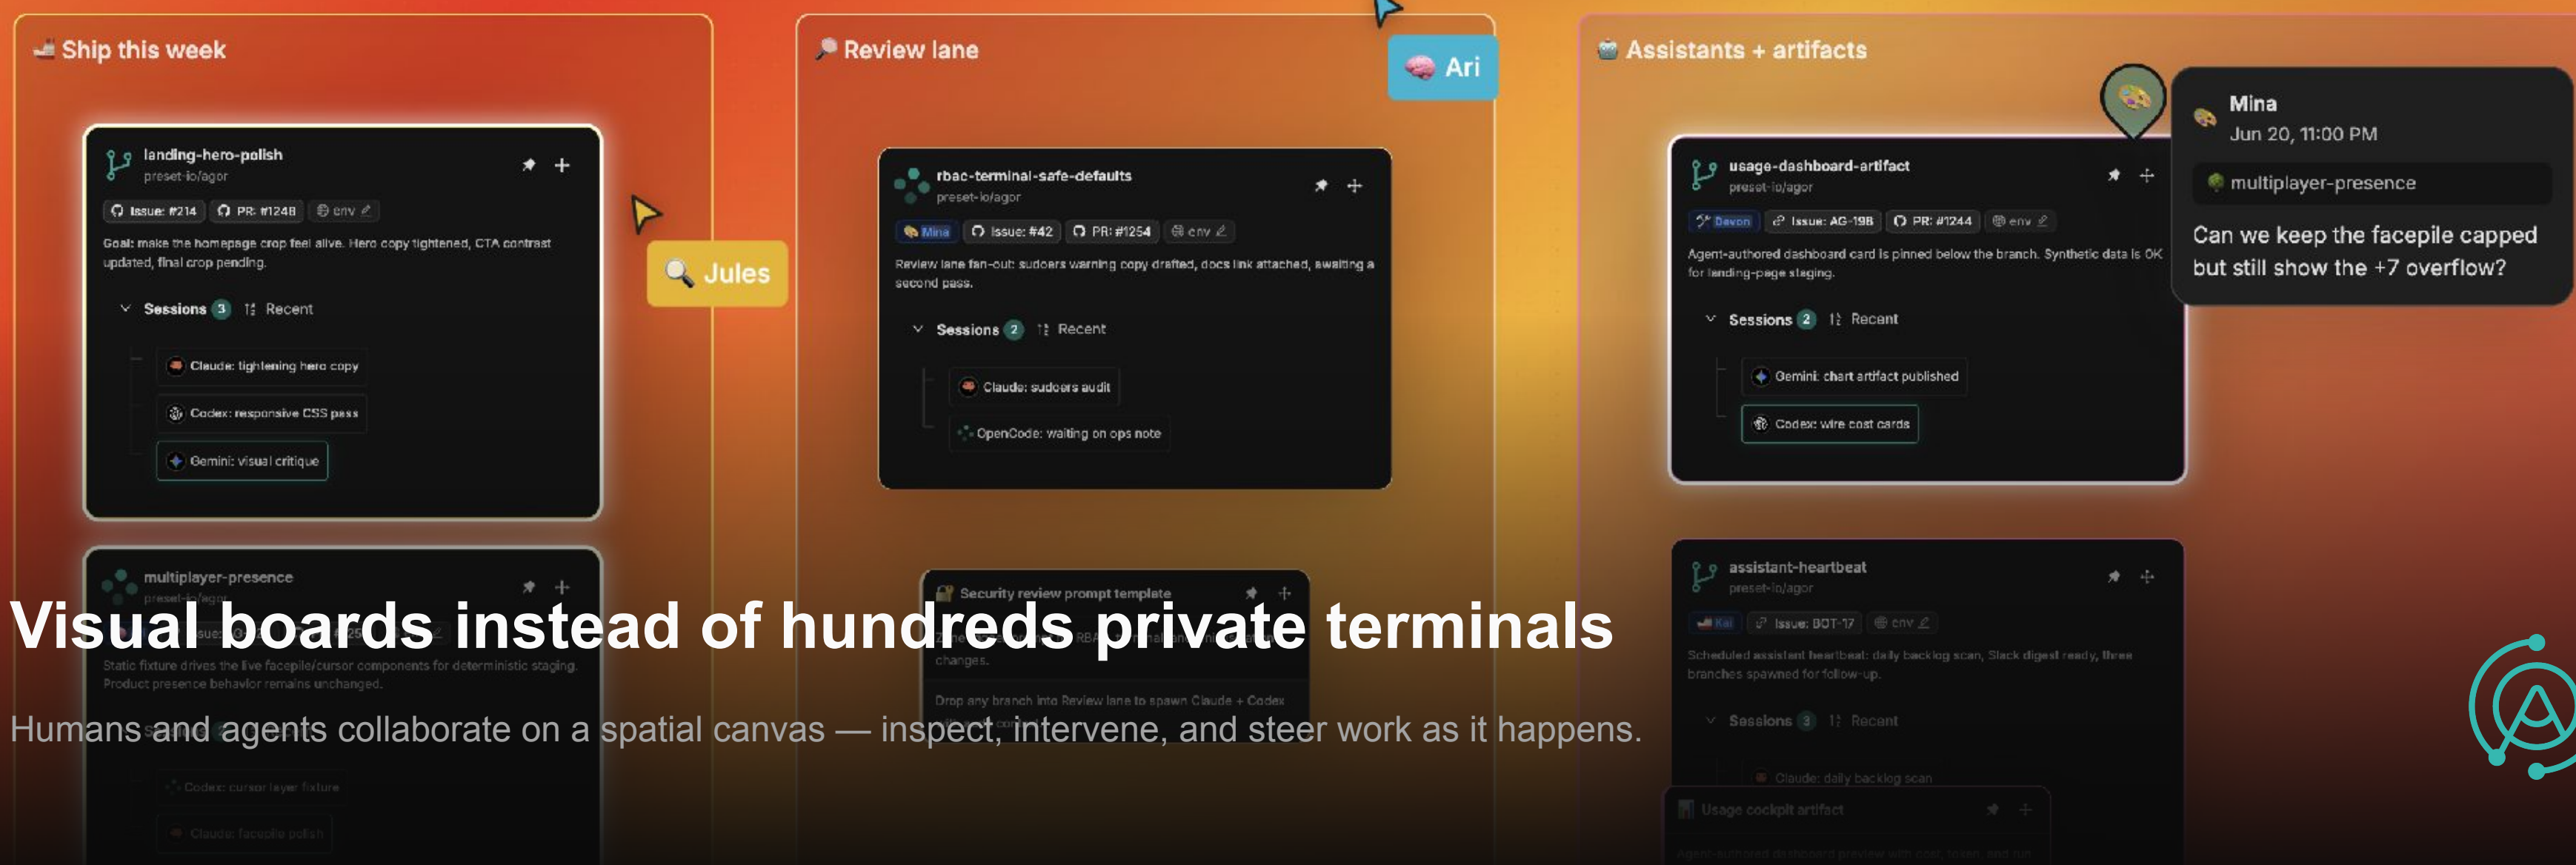

No idea of who's doing what, whether projects have ROI, ...

Built for teams

Bring your agents and your team together.

Visual boards instead of hundreds private terminals

Humans and agents collaborate on a spatial canvas — inspect, intervene, and steer work as it happens.

So much more than a chat box

Multiplayer presence

Live cursors, shared sessions, queued follow-ups, on visual boards

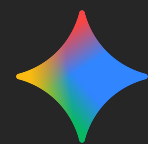

Built on the harnesses you already use

Claude Code

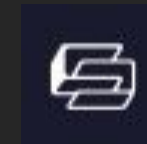

Codex

Gemini

Copilot

OpenCode

Cursor

Bring your own provider and subscription. Pick the best harness per session, no lock-in.

AI teammates

At the core

Persistent agents with memory & tools

Memory

Durable identities with a namespace in the shared knowledge base.

Coordinate and spawn

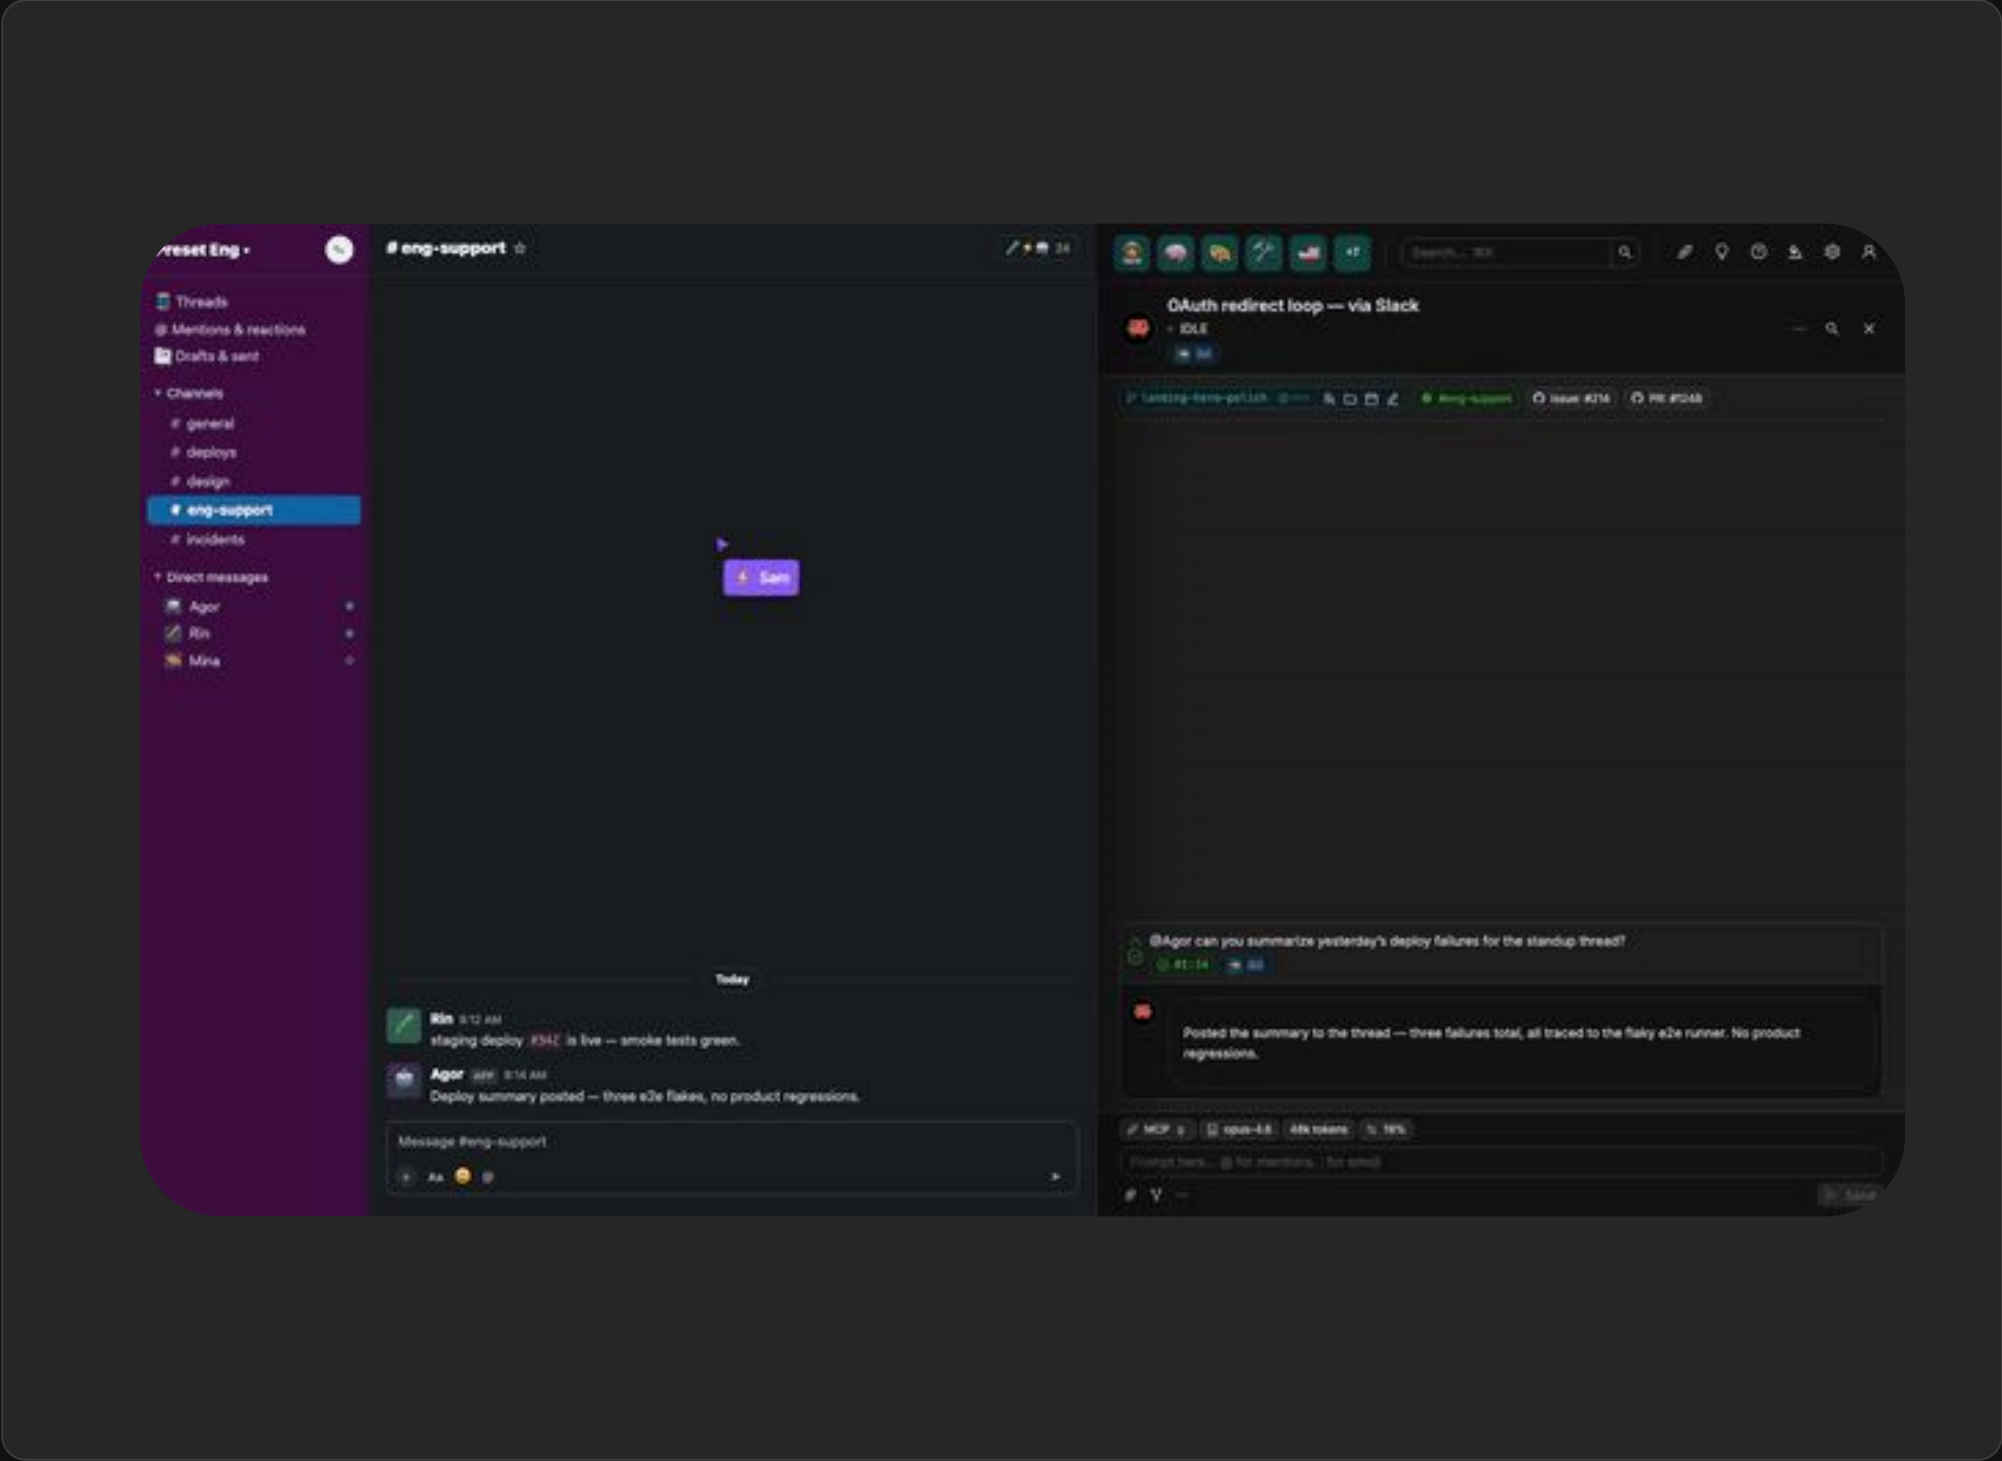

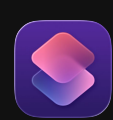

Assistants coordinate tasks and spawn sub-agents across worktrees.

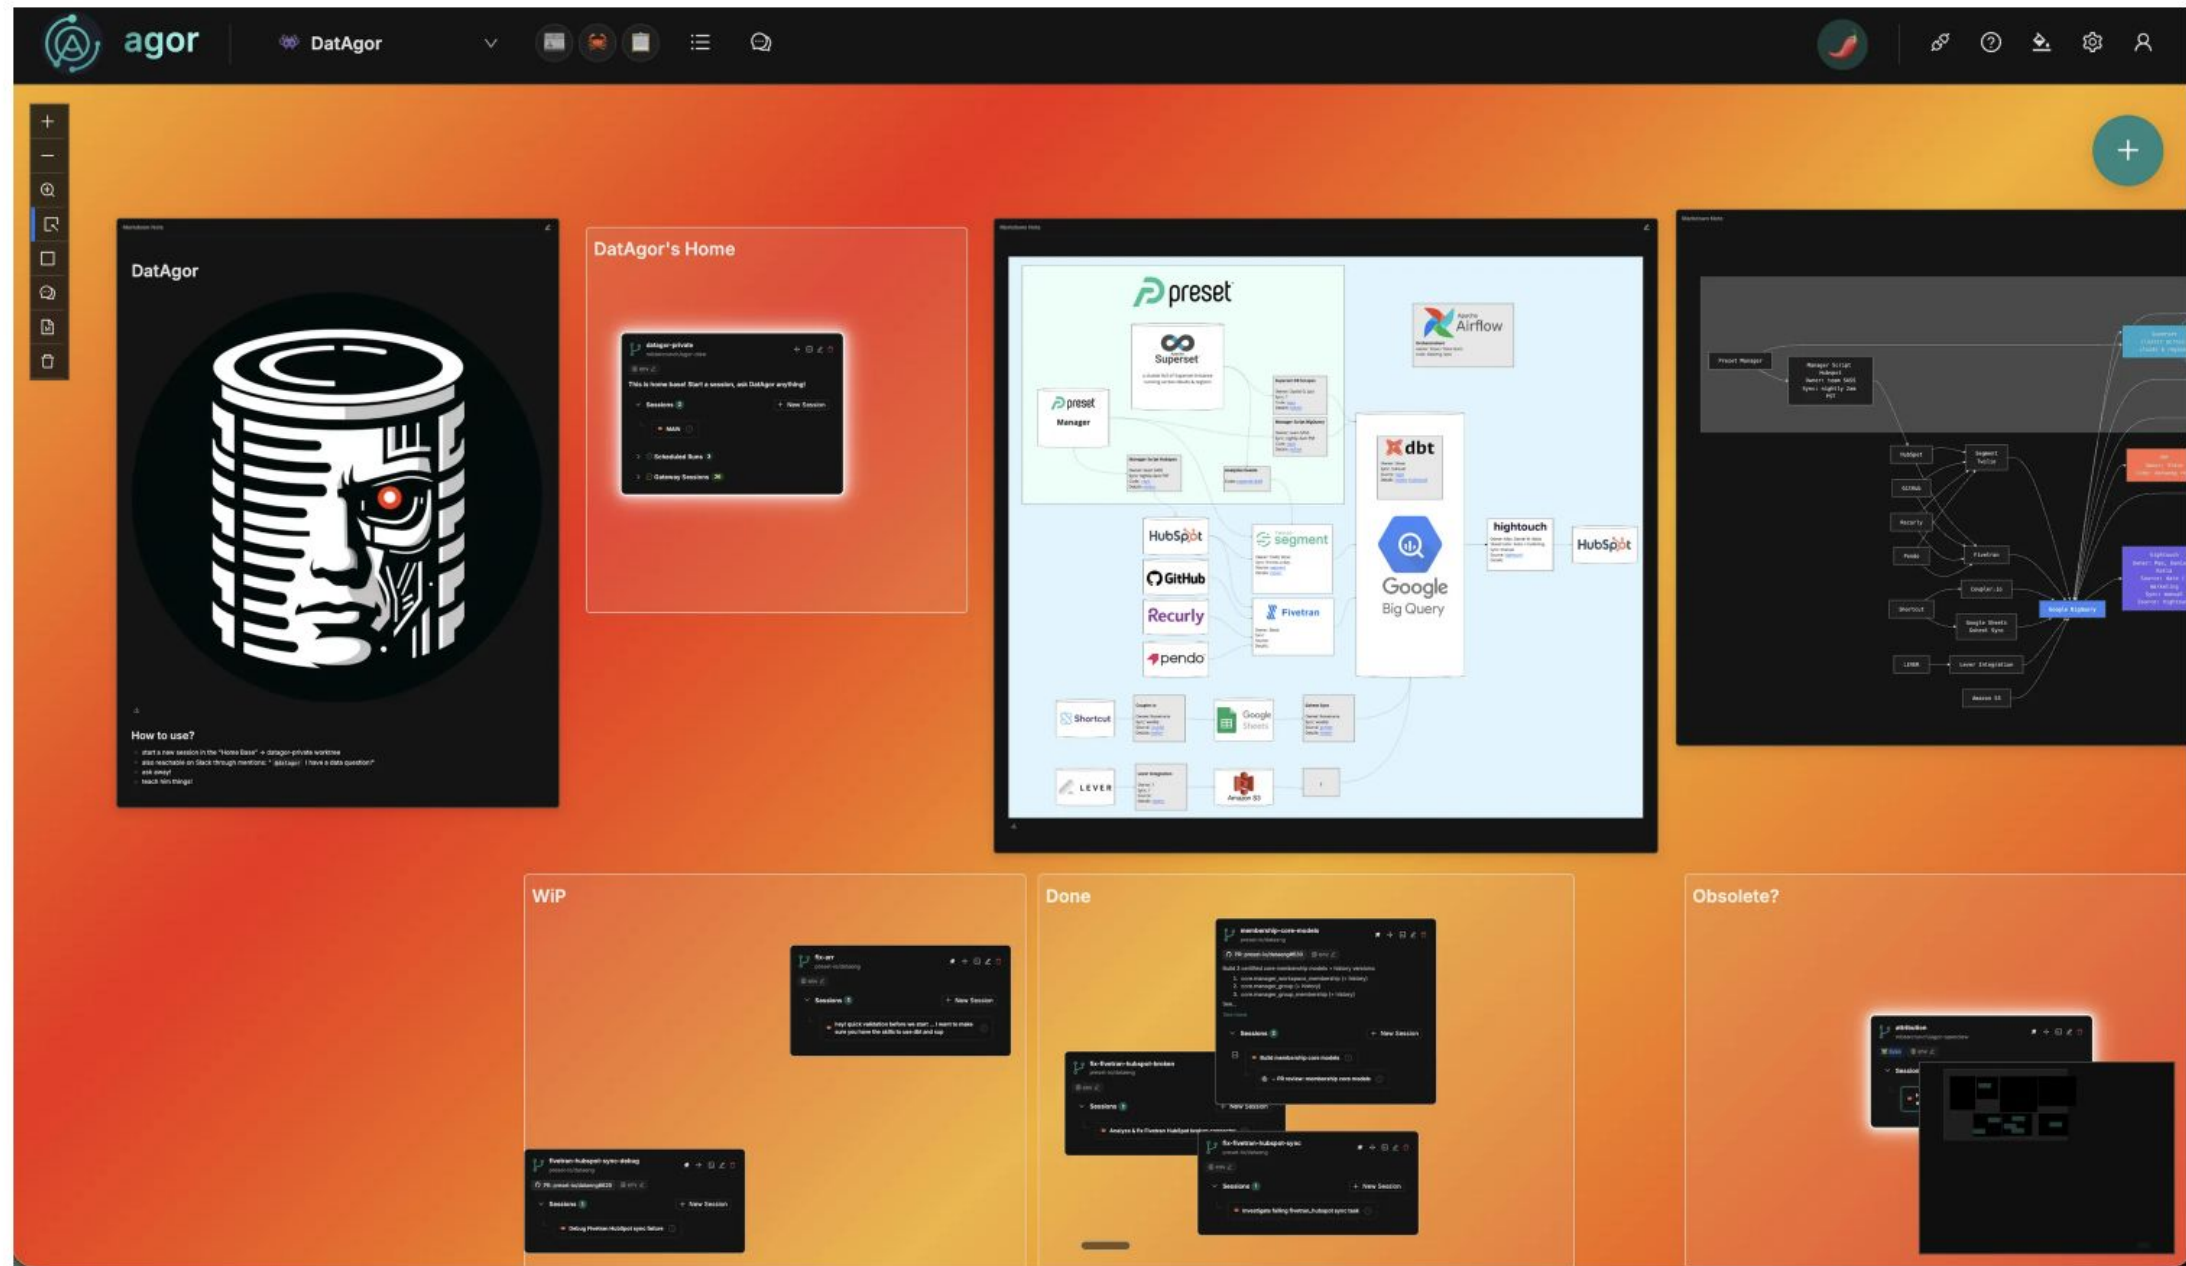

Scheduled agency

Heartbeats, standups, audits, and digests without waiting for a prompt.

Channel gateways

Bring agents where you work, on Slack, GitHub, Discord, Teams / ...

DATA ENGINEERING

Guest Post: I'm DatAgor, Preset's AI Data Engineer

Legal Insight & Review

Under the hood

A full orchestration layer, not just a GUI

HTTP

REST APIs

Control-plane endpoints for sessions, boards, and state — everything scriptable.

WSS

WebSockets

Live, bidirectional event streaming keeps humans and agents aligned in real time.

MCP

MCP tool system

Anything a user can do, an agent can do too — spawn peers, move work, schedule runs, report back.

Agents get awareness of **shared state** and of **each other**.

Live demo

Assistants coordinating agents · teams collaborating live · workflows progressing
with minimal human intervention

bring your agents and your team together

Open and self-hosted. Agor Cloud is opening to teams on September 14th.

BUILT BY  preset™

The image features a series of concentric circles in various shades of red and pink, creating a tunnel-like effect. In the center is a solid dark blue circle. Overlaid on this central circle is the text "That's all Folks!" in a white, elegant cursive script. The text is slightly tilted upwards from left to right. The overall composition is centered and balanced, with a strong visual impact due to the contrasting colors and the iconic phrase.

That's all Folks!
